

SPA2009

Design Principles – Mining Pattern DNA

Eoin Woods
Nick Rozanski
Andy Longshaw

Barclays Global Investors
Barclays Global Investors
Barclays Bank PLC

Agenda

- 00:00-00:15 – Introduction and Overview
- 00:15-00:25 – **Exercise:** Principles vs. Patterns
- 00:25-00:45 – Patterns in Practice
- 00:45-01:30 – **Exercise:** Mining Principles (and Break)
- 01:30-01:40 – Gather Results
- 01:40-01:45 – Overview of Exercise 2
- 01:45-02:30 – **Exercise:** Principles Catalogue (and Break)
- 02:30-02:50 – Gather Results
- 02:50-03:00 – Summary and Wrap Up

Presenters

- Eoin Woods
 - software architect at Barclays Global Investors
 - responsible for Apex, BGI's strategic PM system
- Nick Rozanski
 - enterprise architect at Barclays Global Investors
 - leads the global enterprise architecture group
- Andy Longshaw
 - technical architect at Barclays Bank PLC
 - leads the development of enterprise shared services

The shared "Barclays" affiliation really is a coincidence!

Introduction

- This session is about **design principles** rather than specific patterns or solutions
 - “design principle” to be defined in a moment
- We’re using patterns to find principles
 - because people are very familiar with patterns already
 - and they give us something to search
 - but they’re just a means to and end
- Aim to unlock the knowledge in the design patterns to allow it to be used directly

Design Principles

- What is a “principle” ?
 - a fundamental truth or proposition serving as the foundation for belief or action [OED]
 - a comprehensive and fundamental law, doctrine or assumption [Websters]
- So a design principle is a fundamental “truth” or “law” that serves as the foundation for design action (i.e. guides design decisions)

Principles vs. Patterns

- A **principle** is a general piece of design guidance to be applied in order to guide the process of making one or more design decisions
 - e.g. “Program to interfaces not implementations”
- A **pattern** is a concrete solution to a specific problem that can be directly applied in order to identify the design elements to create
 - e.g. Observer

A pattern is the application of design principles

Published Design Principles

- Classical Design Principles
 - e.g. “minimise coupling” or “hide information” (Parnas)
- Gang of Four
 - e.g. “program to interfaces, not implementations”
- Robert Martin – Principles of OOD
 - e.g. “Single Responsibility Principle”
- Hunt and Thomas – Pragmatic Programmer
 - e.g. “don’t repeat yourself” (DRY)
- Bertrand Meyer – OO Software Construction
 - e.g. “define explicit interfaces”

See the reference sheets we’ve provided for details

Questions We're Interested In

- What are the most important or common principles?
 - is there such a set?
 - or are principles less general than that?
- Are patterns generally based on the same principles?
- Are there principles that apply in all situations?
 - or are all principles dependent on context?
- What specific principles underpin common patterns?
- Are principles independent? Or do they cluster into related groups like patterns?

Exercise 1 – Principles vs. Patterns

- Goal: break into groups and start thinking
- Break into groups of 3 or 4
 - each group needs at least
 - one person who has been using patterns for 5+ years
 - one person who has used patterns for a couple of years
 - one person who generally knows about patterns
 - and any other people who might prove to be useful!
- In your groups
 - identify the most useful 3 design patterns you know
 - identify 3 design principles

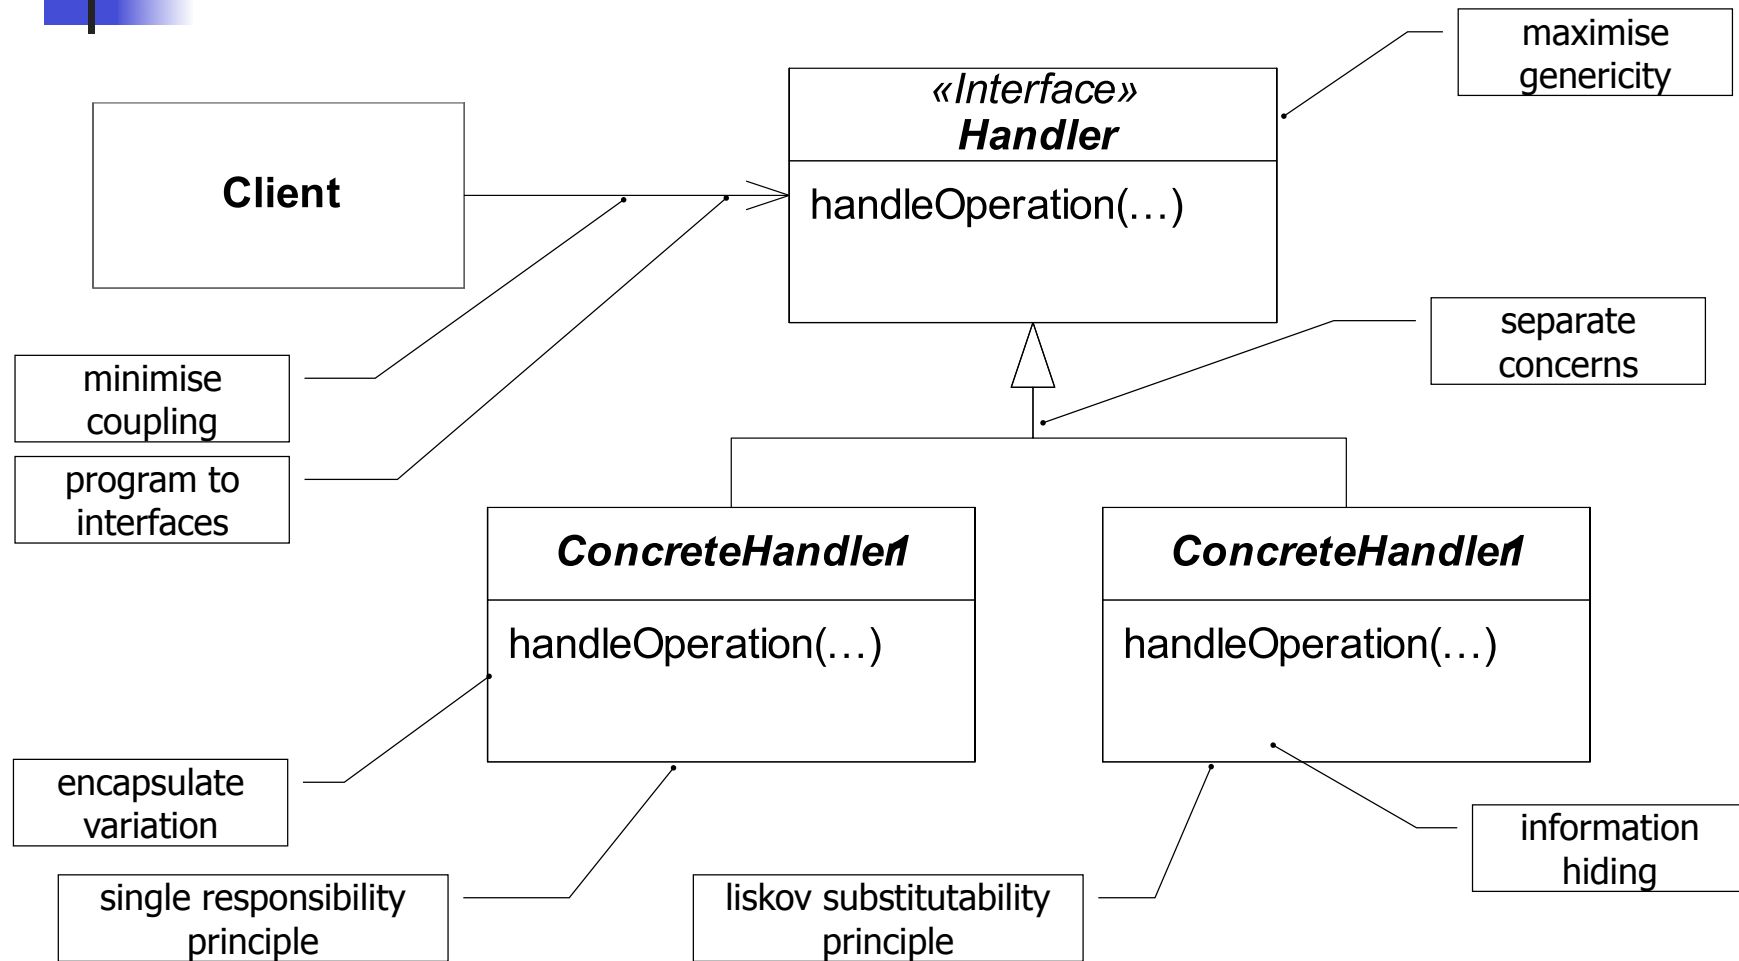

Patterns & Principles in Practice

- Many designers today know about design patterns
- But people understand patterns at different levels:
 - level 1: can name them
 - level 2: can copy them directly
 - level 3: understand them and can apply them fluently
 - level 4: understand the underlying rationale and can reuse it
- Few people seem to consciously understand why patterns work (level 3 and 4)
- This may be because patterns are considered independently of the underlying principles

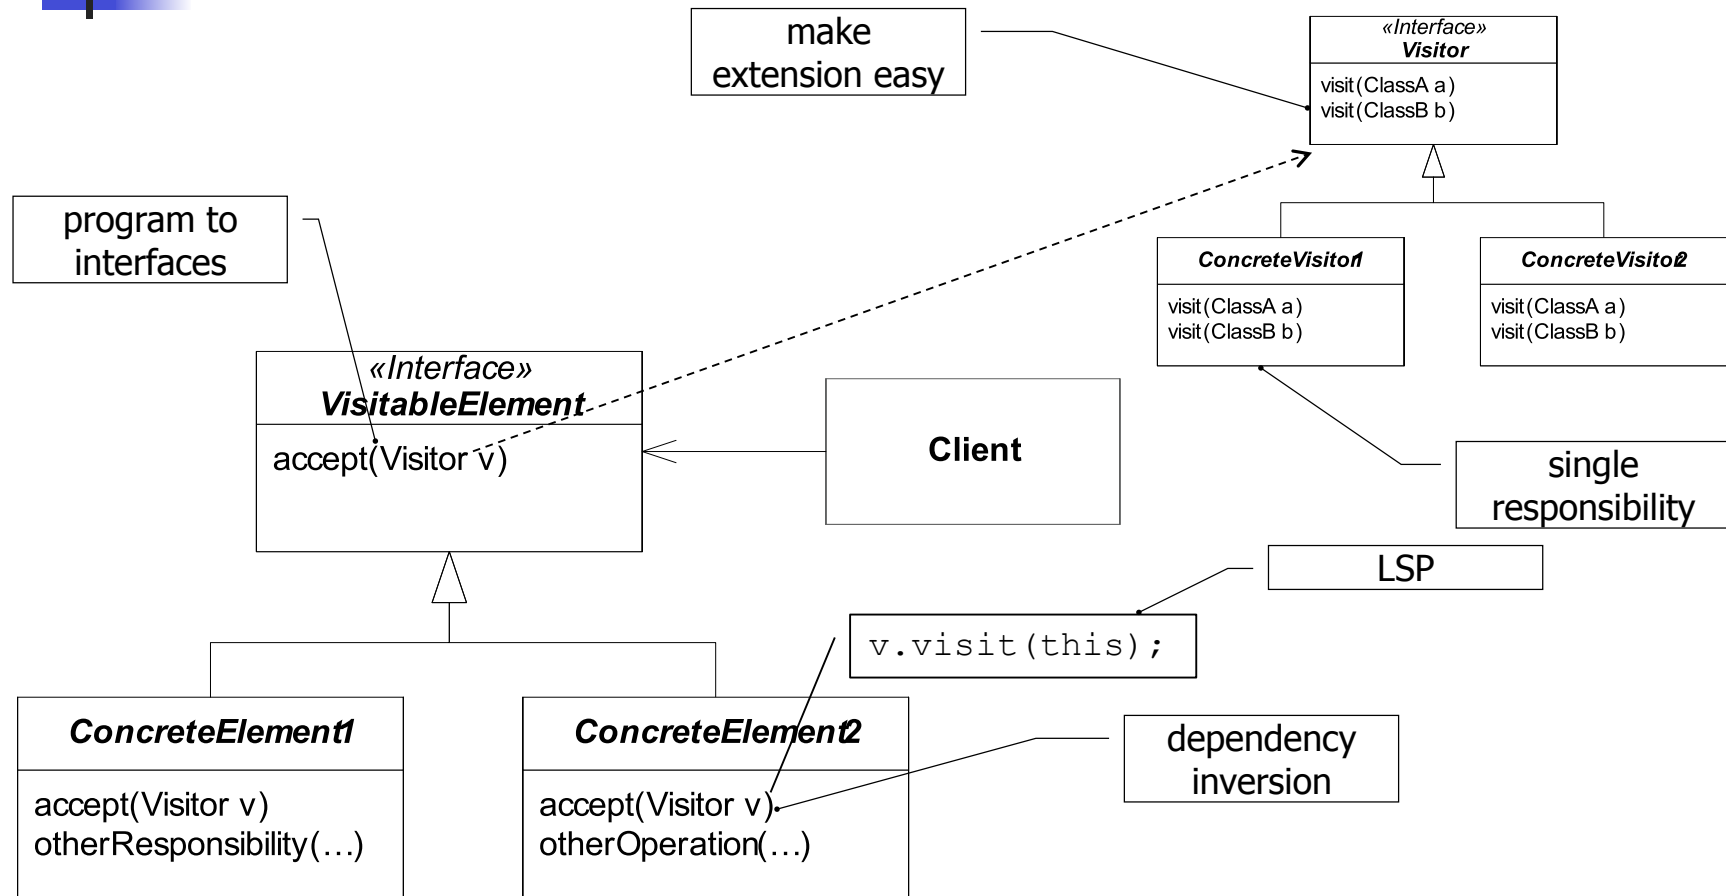

Example: Chain of Responsibility

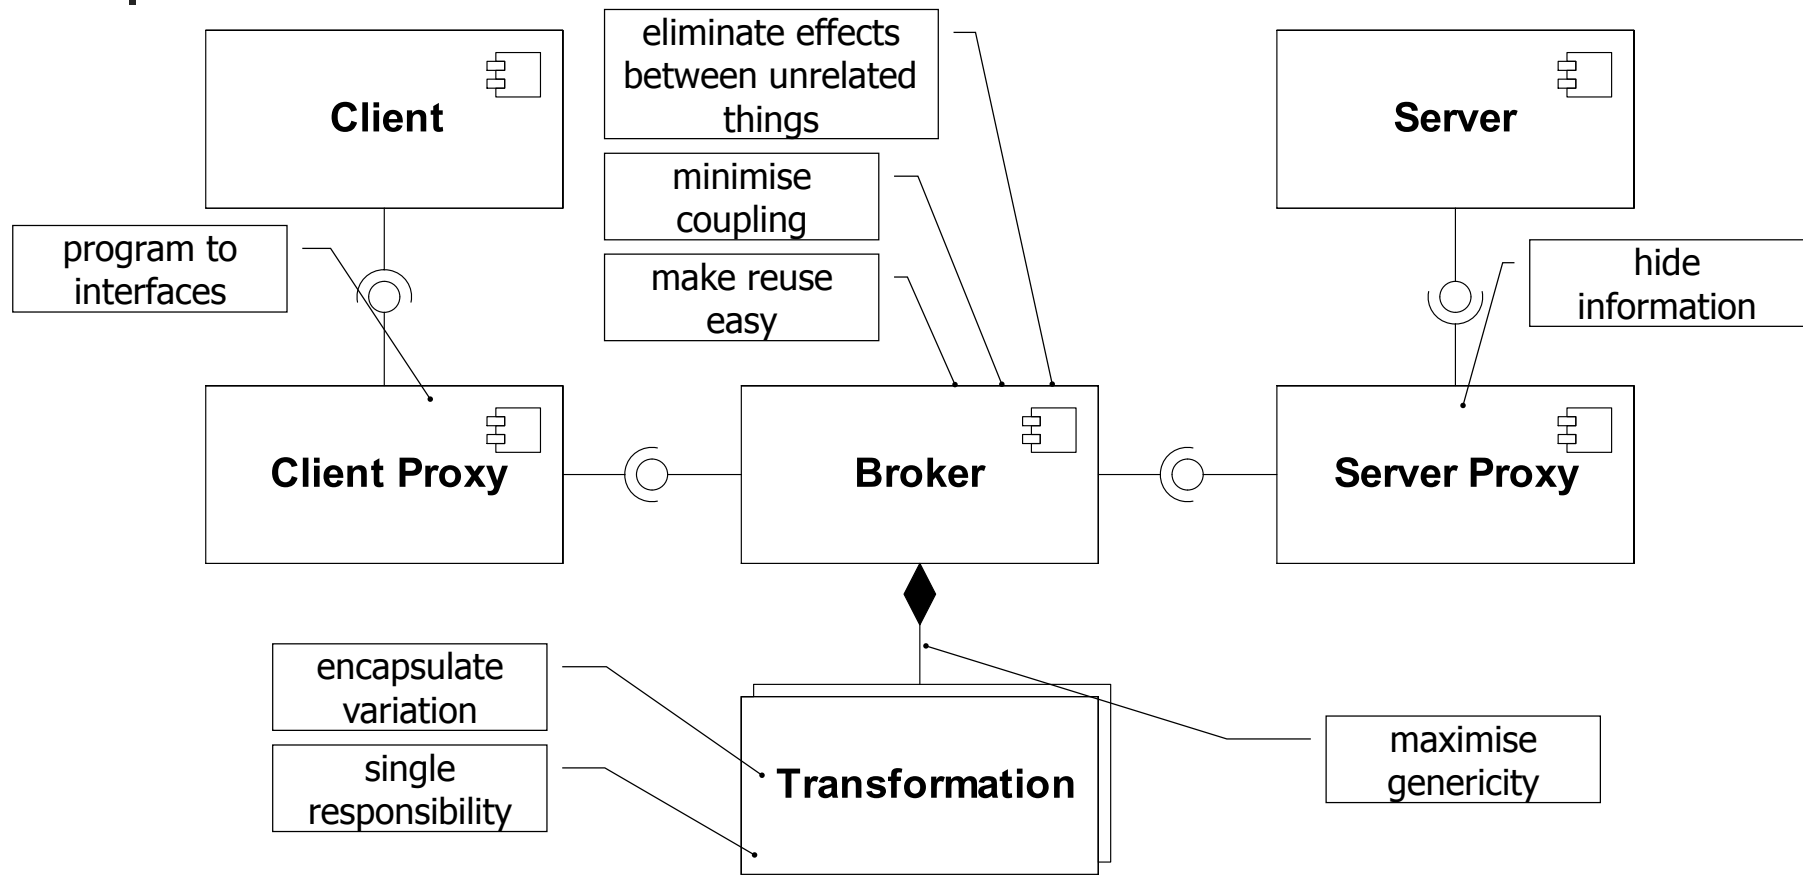

Example: Visitor

Example: Broker

Why is this a problem?

- Like language syntax without semantics
- Prevents deep understanding of the patterns
 - what is “good” about them
 - when to use them
- Hinders effective application of the patterns
 - why they work
- Makes evaluation of design options difficult
 - intuitive feeling of “goodness” without clear rationale
 - results in “smorgasbord” application of patterns

Exercise 2 – Mining Principles

- Goal: find the principles in common patterns
- Inputs:
 - pattern descriptions from GoF, PoSA1 or PoEAA
 - a list of descriptions of candidate design principles
- Process:
 - select 3 or 4 patterns you're familiar with as a group
 - identify principles in each pattern (yours or from the list)
 - classify the principles as of primary or secondary importance
 - note any relationships (e.g. depends or conflicts)
- Outputs:
 - Capture conclusions on flipcharts

Gather Results

- Each group to report back
- Produce a consolidated, themed principles list

Exercise 3 – A Catalogue of Principles

- Goal: classify and organise the principles we have
- Inputs:
 - the results of exercise 1 and the lists of candidate principles
 - your experience of design
 - the name of a “theme” (we’ll suggest one)
- Process:
 - design the content of that “theme” in a principles catalogue
 - identify and organise the principles that should be in it
 - identify the relationships between the principles
 - provide any guidance for those using your catalogue section

Results Gathering

- Each group to report back
- Identify a set of principles that support your theme
 - enumerate the principles
 - identify the relationships between them (if any)
 - something like a pattern language

Summary and Conclusions

- Principles are generally accepted rules to guide the process of design
- Patterns are reusable concrete design solutions for specific problems
- Understanding the principles helps to improve our application of patterns and makes the knowledge more reusable
- We've identified principles in common patterns
 - we'll publish the results in some form online
